Galileo Galilei (1564-1642) - Astronomer and Scientist. Galileo developed a superior telescope and made many significant discoveries in astronomy. He was sentenced to life imprisonment by the inquisition for his support for the Copernican theory that the sun was at the centre of the solar system.

Galileo was born in Florence, Italy in 1564 to a poor but noble family. His parents recognised their child's innate intelligence and talents and so made sacrifices to have him educated. At his father's insistence, Galileo studied the profitable career of medicine. But, at the University of Pisa, Galileo became fascinated in a wide range of subjects. He was also critical of many of Aristotle's teaching which had dominated education for the past 2,000 years.

Galileo was appointed to be a mathematics professor at the University of Pisa, but his strident criticisms of Aristotle left him isolated among his contemporaries. This text is for questions 39 to 42.

A tsunami is a series of ocean waves that sends surges of water, sometimes reaching heights of over 100 feet (30.5 meters), onto land. These walls of water can cause widespread destruction when they crash ashore.

These awe-inspiring waves are typically caused by large, undersea earthquakes at tectonic plate boundaries. When the ocean floor at a plate boundary rises or falls suddenly, it displaces the water above it and launches the rolling waves that will become a tsunami.

Most tsunamis, about 80 percent, happen within the Pacific Ocean’s “Ring of Fire,” a geologically active area where tectonic shifts make volcanoes and earthquakes common.

Tsunamis may also be caused by underwater landslides or volcanic eruptions. They may even be launched, as they frequently were in Earth’s ancient past, by the impact of a large meteorite plunging into an ocean.

Tsunamis race across the sea at up to 500 miles (805 kilometers) an hour—about as fast as a jet airplane. At that pace they can cross the entire expanse of the Pacific Ocean in less than a day. And their long wavelengths mean they lose very little energy along the way.

A tsunami’s trough, the low point beneath the wave’s crest, often reaches shore first. When it does, it produces a vacuum effect that sucks coastal water seaward and exposes harbor and sea floors. This retreating of sea water is an important warning sign of a tsunami, because the wave’s crest and its enormous volume of water typically hit shore five minutes or so later. Recognizing this phenomenon can save lives.

A tsunami is usually composed of a series of waves, called a wave train, so its destructive force may be compounded as successive waves reach shore. People experiencing a tsunami should remember that the danger may not have passed with the first wave and should await official word that it is safe to return to vulnerable locations.

Some tsunamis do not appear on shore as massive breaking waves but instead resemble a quickly surging tide that inundates coastal areas.

39. Why did the author write the report?
   A. To raise people’s awareness about tsunami.
   B. To warn people about an upcoming tsunami.
   C. To inform people about past tsunamis.
   D. To inform people about the different types of tsunami.
   E. To warn people about the dangers of tsunami.

40. Tsunamis are usually the result of ....
   A. the sudden rise or fall of ocean floors
   B. Pacific Oceans “Ring of Fire”
   C. the awe-inspiring waves
   D. volcanoes
   E. landslides

   C. they are tall, fast, forceful and repetitive
   D. they have a vacuum effect

Pakistan’s houbara bird facing extinction

The indiscriminate hunting of endangered houbara bustard birds in Pakistan by rich hunting parties from the Gulf nations have pushed the species toward extinction. The hunting was initially banned by the Pakistani courts, but under continuous pressure from the provincial governments of Sind, Baluchistan, and Punjab, as well as the federal government, recently the courts lifted the ban on the hunting of this vulnerable species.

Some people in Pakistan have been advocating for sustainable hunting of the species instead of a complete ban, but this is highly debatable. Reckless hunting for decades has pushed this beautiful species toward extinction and it is now critically endangered in Pakistan.

No reliable or credible statistics on the population dynamics of the species are available either. Unless specially protected by law, the species runs the risk of becoming extinct in the wild in the next few decades.

Under these circumstances, the only logical approach to save the species from extinction in the not-so-distant future is to immediately start comprehensive captive breeding program for the species across the nation.

If the captive breeding program runs successfully and produces an appreciable number of chicks, then reintroduction programs could be initiated in their wild habitats.

Only after rebuilding the population for some time in the wild and allowing them to breed naturally to reach a sustainable population could some restricted hunting be planned. Currently, the low numbers have made this species vulnerable and with zero or poor monitoring, sustainable hunting practices in Pakistan for this dwindling species will not work.

Game hunting works only when a stable population is achieved with strict monitoring on the ratio of males to females hunted per season. If the females (no true statistics available) are being taken out of the population through random hunting, the population is sure to pass through a bottleneck in the wild habitat, with high vulnerability to eventual extinction.

The people of Pakistan need to decide what is more important—a few petrodollars or protecting the biodiversity of the nation.

Nowadays, the police have been applying the new regulation concerning the use of seat belts. In European countries, this regulation has been applied for a long time. However, this new regulation has become controversial and is an interesting topic to discuss. Here are some of the arguments.

The use of seat belts has been proven to reduce the risk of injury or death in an accident. Seat belt has become a standard component in cars. The research shows that most car accident will cause an injury to the head. Frequently, drivers or the passengers driving without seat belts die because of this. By wearing the seat belts, the injury will not happen since belts restrain our body on the car seat when the accident happens.

Unfortunately, many cars, especially the old ones, don't have seat belts. This is because the traffic conditions in the past were unlike the recent traffic conditions. The designer of old cars didn't consider a seat belt as an important part. Besides, the drivers wearing the seat belt will think that they are completely safe, so they may drive carelessly. They are safe, indeed, but how about safety of other?

The seat belt is only one of the ways to reduce the risk of car accidents. It doesn't mean that we are completely safe. In short, our safety depends on ourselves.

47. What is the main idea of paragraph 3?
   A. Old cars do not use seat belts.
   B. The old cars have seat belts for their safety.
   C. The drivers wear seat belts may drive carefully.
   D. The traffic conditions in the past were similar to the recent.
   E. The old cars' designer considered a seat belt as an important part.
48. What is the function of seat belts?
   A. To reduce the traffic conditions.
   B. To become a standard component in cars.
   C. To reduce the risk of injury or death in an accident.
   D. To prevent the drivers driving cars carefully.
   E. To increase the risk of injury in car accidents.

49. Who considered a seat belt as an unimportant part?
   A. Police.
   B. People.
   C. Drivers.
   D. Passengers.
   E. Old cars designer.

50. "... that they are completely safe." (Paragraph 3)
    What does the word ‘they’ refer to?
   A. Cars.
   B. Seat belts.
   C. Drivers.
   D. Designers.
   E. Others.
